Acronis Cyber Protect Cloud Integration with Addigy

Streamline your service provider business by keeping your macOS environment connected and secure

What's the importance?

As macOS workloads become increasingly prevalent in today's business IT environments, service providers must be equipped with the right tools to identify, monitor, and secure these new attack surfaces against cybercriminals. Yet juggling multiple endpoint protection solutions and management tools may complicate your management efforts, hamper your team's productivity, and jeopardize your ability to keep clients secure.

The integration of Acronis with Addigy — a leading cloud-based IT platform for managing Apple devices — ensures client data is always protected. Strengthen backup and security, and simplify management by applying sophisticated protection plans through the same interface you use to manage your other service offerings.

Gain the advantage

The integration with Addigy enables remote mass-deployment of Acronis Cyber Protect Cloud — which unifies best-of-breed backup, cybersecurity, and endpoint protection management in a single-agent solution — on as many macOS workloads as needed with minimal efforts. Additionally, you can efficiently apply and monitor cyber protection plans and statuses, leveraging the native Addigy tools.

ABOUT ACRONIS CYBER PROTECT CLOUD

The only single-agent solution that natively integrates best-of-breed backup, cybersecurity, and management to protect endpoints, systems, and data.

The world's best backup and recovery

Full-image and file-level backup and recovery safeguard macOS workloads — with near-zero RPOs and RTOs.

Enhanced with essential cybersecurity at no additional cost

Stay ahead of modern cyberthreats with award-winning anti-malware and antiransomware capabilities.

With protection management built for service providers

Centralize your protection management and provision macOS workloads in minutes. Assess system vulnerabilities and security gaps while increasing visibility with built-in monitoring.

ACRONIS CYBER PROTECT CLOUD INTEGRATION WITH ADDIGY - USE CASES

Ensure your clients' macOS workloads are backed up and protected with the most reliable and easy-to-use cyber protection solution.

Simple configuration

The integration with Addigy leverages standard enrollment and configuration policies for macOS devices. A special script enables automatic download of the latest version of the Acronis installer for your Mac architecture and operating system, selecting either the Intel or Silicon (ARM) installer as appropriate for your environment.

Remotely install the protection agent on macOS devices

Once the configuration is done, simply add the Custom Software you've created to the policies you wish to deploy Acronis Cyber Protect Cloud to. Deployment is supported on Intel and M1 devices.

Apply cyber protection plans on a client level

Unleash the power of <u>Acronis Cyber Protect Cloud</u> to strengthen the cyber resilience of you and your clients. Leverage a default protection plan for all macOS devices used by an Addigy account. You can set any existing protection plan as a default one. This plan will then be applied immediately after installation and registration, protecting your clients' macOS workloads with a single action.

Monitor protection statuses and receive Acronis alerts

Monitor the status of applied protection plans within the Addigy interface. Simply and quickly choose and configure the Acronis Facts you wish to monitor in your Addigy environment. Elevate the power of Addigy's native mechanisms, receive synchronized alerts, and remediate any issues on the macOS devices you manage for your clients.
