

Panda Technology delivers scalable cyber protection to health care organizations facing HIPAA

Panda Technology uses Acronis Cyber Platform with EDR / XDR to protect elderly care organizations and support compliance requirements

Panda Technology, a Florida-based MSP, needed a scalable way to protect highly sensitive health care data while supporting regulatory and compliance requirements. Panda Technology needed to consolidate cybersecurity, backup and recovery, and management into a single platform to achieve faster threat response, operational efficiency and stronger protection.

THE SOLUTION

Panda Technology delivers managed cyber protection services using the Acronis Cyber Platform with Backup, Disaster Recovery, Email Security, Archiving and EDR / XDR.

THE IMPACT

- **Faster incident response:** Integrated EDR and XDR provide the visibility to quickly investigate and contain threats before they impact patient data or operations.
- **Greater efficiency:** One integrated platform reduces tool sprawl and complexity.
- **Scalable growth:** Rapid deployment supports expansion without added overhead.

KEY CHALLENGES:

- Protecting sensitive health care data from cyberthreats.
- Supporting compliance through auditing, logging and monitoring.
- Managing protection across client environments without added complexity.

KEY REQUIREMENTS

- Unified cyber protection platform with centralized visibility.
- Reliable backup and disaster recovery for business-critical systems and patient records.
- Security controls that align with health care and compliance requirements such as HIPAA and Cybersecurity Maturity Model Certification (CMMC).

“Acronis has allowed us to scale our business and deploy rapidly, so we can quickly onboard new customers without needing to add much new overhead. The fact that I can put our stack together and I can stand it up against the client’s compliance requirements has been a huge factor for us.”

— Joshua Aaronson, COO and Co-founder, Panda Technology
