

Collaboration Security

SharePoint, Teams, OneDrive and Microsoft 365 (M365) collaboration applications have become increasingly popular. As usage has risen, the data and content evolved in these collaboration applications have increasingly become attractive targets for threat actors.

Boost revenue, secure collaboration apps and centralize Microsoft 365 protection within a single multi-tenant app.

Robust threat detection and mitigation

Acronis **dynamically scans 100% of the content** (files and URLs) in collaboration apps for all types of content-related threats like:

- Ransomware and malware
- Malicious URLs embedded in files
- Advanced attacks such as APTs and zero days

Acronis' solution **detects 99.95% of threats**, preventing them from spreading and providing instant alerts.

Integrated managed incident response (IR) service

Fully managed IR service that gives your clients direct access to cyber analysts and email security experts at no additional costs. This **SOC resource saves up to 75%** on incident response.

The IR service:

- Monitors, analyzes and reports all incidents flagged.
- Analyzes and reports on all incidents flagged across multiple clients.
- Handles false positives and false negatives.
- Contains and remediates incidents.
- Optimizes decisions and rules based on new, unseen attacks.
- Provides 24/7 support.

Lower total cost of ownership (TCO)

With multitenant capability, reduce admin overhead and costs by managing each client's Microsoft 365 apps from a single platform.

The Acronis Platform advantage

Deliver complete Microsoft 365 protection, with the fastest time to profit and most efficient management, in a single platform:

- Backup
- Email Security
- Collaboration Security
- Email Archiving
- Security Posture Management for Microsoft 365
- Security Awareness Training

Plus, backup for 30+ other workloads with natively-integrated RMM, PSA, EDR, XDR, MDR and disaster recovery.

At a quick glance: Collaboration Security

Consolidation in action

A single platform, including Microsoft 365 collaboration security, can launch multiple compelling services and solutions from Acronis — all within one platform.

Unparalleled protection

Collaboration Security offers unparalleled detection with low FP rates, and outperforms Microsoft Defender in accuracy and speed.

True prevention

All content is scanned dynamically, not inline. When a malicious file is detected, it is deleted in near real time.

Managed incident response

A 24/7 fully managed IR team extends your SOC capability to effectively manage and remediate incidents.

Effortless deployment

Natively integrates with Microsoft APIs for efficient, seamless deployment.

Multitenant solution

Manage a portfolio of clients efficiently from the same platform.

Quick activation

Fast and easy deployment, no network changes required. No long manuals or complex configurations needed.

About Acronis

Acronis delivers natively integrated cyber protection, combining advanced cybersecurity, data protection and endpoint management. Acronis' solutions, built for MSPs, SMBs and enterprise IT departments, efficiently identify, prevent, detect, respond, remediate and recover from cyberthreats, ensuring cyber resilience, data integrity and business continuity.
