

The Acronis logo is positioned in the top right corner of the page. It consists of the word "Acronis" in a white, sans-serif font, set against a dark blue rectangular background. The overall background of the page is a dark blue gradient with a large, stylized profile of a human head on the right side, composed of fine lines. The interior of the head is filled with a complex, red and white digital data visualization, including various icons like warning signs and padlocks, and abstract patterns of lines and dots. A white diagonal shape cuts across the left side of the page, creating a space for the main text.

GUIDE

How to take the headache out of IT security

Solve your
cybersecurity
problems, save money
and find relief

As cyberthreats grow in sophistication, MSPs and IT teams face a complex web of cybersecurity tools and vendors. This added complexity creates numerous headaches for IT staff tasked with monitoring and remediating threats. From IT skills gaps, to compliance requirements, to skyrocketing cyber insurance costs and risks, the challenges facing MSPs and IT teams are only growing. It's time to take the headache out of IT security.

IT security headaches share common symptoms.

Problem

Solution

- | | |
|---|---|
| <p>! Evolving threats. Phishing attacks grew 4,151% since the arrival of ChatGPT, and email-based attacks increased by 197% in H2 2024. There's always another threat vector and attack surface to protect.</p> | <p>✓ Integrate cybersecurity and data protection to ensure that if an attack bypasses your defense, you have the detection, response and data recovery solutions in place to neutralize threats and recover your data.</p> |
| <p>! Compliance requirements. To meet local regulatory requirements, businesses must reach a certain level of cyber maturity. Failing to do so can result in legal, reputational and financial consequences.</p> | <p>✓ Model your cybersecurity strategy on the NIST (National Institute of Standards and Technology) or similar frameworks and choose security solutions that satisfy each function of the frameworks.</p> |
| <p>! Cyber insurance costs and risks. You might never use it, but many regulations require it, and you must have it to protect your business. Better cybersecurity means lower premiums and improved compliance.</p> | <p>✓ Evaluate your security posture to fill the gaps in your cybersecurity strategy and tools that will lead to rejected coverage or either canceled or expensive coverage.</p> |
| <p>! Multiple, complex security solutions. Having multiple solutions from multiple vendors is a big headache, but most vendors don't provide all the services and tools needed in one platform.</p> | <p>✓ Consolidate your cybersecurity stack and vendor portfolio to simplify management and evaluate solutions that incorporate all your cybersecurity needs in one platform.</p> |
| <p>! Skills gaps and training. Complex security tools expose skills gaps and require continuous training that drains time and resources.</p> | <p>✓ Choose cybersecurity solutions that are designed for ease of deployment and use, and that can be managed by staff of varying skill levels.</p> |
| <p>! Budget constraints and competing priorities
Budgets are tight and cybersecurity sometimes competes with other business investments.</p> | <p>✓ Assess the potential losses and consequences of a data breach to determine how prioritizing other budget items could impact your security posture.</p> |

Acronis takes the headaches out of IT security.

Acronis combines integrated cybersecurity, data protection and endpoint management in a single solution. Designed for MSPs and IT teams, Acronis solutions reduce complexity and simplify cybersecurity so you can focus more on your business and less on managing products and vendors.

Natively integrated protection

- Endpoint Detection and Response (EDR)
- Extended Detection and Response (XDR)
- Managed Detection and Response (MDR)
- Complete Microsoft 365 protection
- Email Security
- Security Awareness Training
- Patch management
- Vulnerability assessments

Complete protection for everyone: Businesses, MSPs and home users

Businesses

Secure, restore and recover in one click.

The most secure backup and rapid recovery with natively integrated cybersecurity, endpoint management and EDR.

[BUSINESS SOLUTIONS](#)

MSPs

Painlessly grow your security portfolio.

Natively integrated backup, email security, Microsoft 365 and Google Workspace security, EDR / XDR / MDR, RMM and security awareness training.

[MSP SOLUTIONS](#)

Home

Never lose the data you care about.

Complete protection against cyberattacks, data loss and identity theft in an easy-to-use solution for home users.

Acronis is trusted, recognized and certified.

Acronis has been named in the Leader quadrant of the G2 Winter 2025 Grid.®

[Report for Endpoint Protection Suites](#)

To be included in the Endpoint Protection Suites category, a product must:

- ✔ Facilitate control over disparate endpoints.
- ✔ Provide endpoint malware and antivirus protection.
- ✔ Facilitate the detection and remediation of web-based threats.
