Acronis
Cyber Protect Cloud

Simplify cybersecurity with an all-in-one, integrated platform for MSPs.

Acronis Cyber Protect Cloud is the only solution that natively integrates cybersecurity, data protection and management to protect endpoints, systems and data. This synergy eliminates complexity, so service providers can protect clients better while keeping costs down.

Why Acronis Cyber Protect Cloud?

Increased control

Reduce complexity and control the services you deliver for your clients: security, backup, disaster recovery, remote monitoring and management. All with the flick of a switch.

Vendor consolidation

Managing multiple vendors leads to increased costs, greater risk and added operational overhead. Consolidate your vendors and increase efficiency of service delivery to your clients.

Centralized management and monitoring

Efficiently manage and monitor your clients through a single console, giving you better and more effective control over their cyber protection.

Reduced training time

By delivering client services through a single console, you can reduce training time for new technicians by up to 50%, and enable them to focus more time on driving business.

World class partner support

Drive your business with prepackaged marketing campaigns, training and other resources available through the Acronis Partner Portal.

Acronis Cyber Protect Cloud Capabilities

Cybersecurity	Remote monitoring and management	Backup and disaster recovery	Professional Services Automation	Integrations
Our AI powered cybersecurity solutions include next-gen antimalware, email security, and EDR/ XDR to enable partners with strong, complete protection against ransomware and other threats. With Acronis, cybersecurity isn't an add-on — it's integrated with our backup and recovery capabilities so you get true end-to-end protection and recoverability if needed.	Deliver superior IT administration and monitoring services, elevate client security and boost technician performance with automation. Enable proactive and preemptive IT management through automated patch management, system and hardware monitoring, anomaly-based monitoring, auto-response actions, AI-assisted scripting and remote desktop assistance.	Protect your clients' data no matter where it might reside across physical, virtual and cloud-based environments. Backup and recovery capabilities include the ability to bring data back in whatever form it's needed — full image, file-based and more, while secure disaster recovery minimizes downtime with the ability to quickly spin-up workloads in the cloud.	Increase profits and streamline business operations with an easy-to-deploy and use PSA tailored for modern recurring and cloud service MSP business models. Includes comprehensive integrations with RMM and accounting systems, service desk, billing and invoicing, contract and quotation management, stock inventory, project management and insightful analytics via KPI reports.	Pre-configured integrations with over 200 most popular MSP tools make your life easier. Only Acronis brings together complete cyber protection integration across one easy-to-use platform, which works seamlessly with all your existing services and products.
