

12 steps to make your business more cyber resilient

Fight AI-enabled ransomware and other threats with integrated defense and recovery

AI-enabled cyberthreats are growing in frequency and impact. Regulators, standards bodies and insurers are now recommending or requiring new defensive and recovery measures. **Respond with a 12-step plan for improved cyber resilience.**

Defensive measures

01

Deploy AI-enabled anti-malware on endpoints and EDR across the business

02

Update countermeasures like email security and URL filtering

03

Deploy tools that increase your visibility of IT resources and data flows

04

Eliminate external and internal network exposures

05

Manage passwords and access rights vigilantly

IT and cybersecurity skills and processes

06

Build a security awareness training program

07

Implement automated, programmatic vulnerability scanning and patch management

08

Reduce the number of agents on endpoints and consoles in your operations center

09

Use cybersecurity frameworks to assess and update defense and recovery strategies

Recovery measures

10

Implement a robust data protection regimen

12

Build an incident response plan and regularly test and update it

11

Consider implementing a disaster recovery program
