

DIAMATIX and Acronis boost Bulpharma cybersecurity and data protection across health care operations

Leading Bulgaria-based health care provider improves cyber resilience with managed cybersecurity and integrated disaster recovery services.

Bulpharma, a major leading health care provider, needed strong security, data protection, and recovery capabilities to maintain operational confidence as its environment grew more complex and regulatory expectations increased.

DIAMATIX, a managed service provider specializing in cybersecurity and data protection, partnered with Bulpharma to deliver managed cyber protection services built on the natively integrated Acronis Cyber Platform.

THE SOLUTION

DIAMATIX delivered managed security, backup and disaster recovery services using Acronis Cyber Platform, supported by its own certified security operations center (SOC).

THE IMPACT

- **Improved security posture:** Managed protection through Diamatix's certified SOC and the Acronis Cyber Platform improved Bulpharma's security posture.
- **Faster recovery confidence:** Backup and disaster recovery enable rapid restoration during outages or disruptions.
- **Operational resilience:** Bulpharma gains confidence knowing its systems are protected by an experienced partner.
- **Trusted partnership:** Diamatix's certifications and service expertise reinforce trust with a leading health care end-user customer.

KEY CHALLENGES:

- Health care workloads required continuous system availability.
- Outages or data loss posed significant risk to health information systems (HIS) data.
- Bulpharma required a security partner with proven, certified cybersecurity and data protection capabilities to meet regulatory requirements such as NIS2.

KEY REQUIREMENTS:

- **Fast, reliable recovery:** Ensure rapid restoration of critical systems and data.
- **Disaster recovery readiness:** Support continuity during outages or disruptive events.
- **Health care-ready resilience:** Meet the security demands of a large, complex, multi-location regulated environment.

DIAMATIX

“HIS is important for the local regulations. This is critical to the Bulgarian Ministry of Health. There are heavy databases that need to be backed up. One of the core solutions is Acronis Backup, and the most important is disaster recovery.”

— Sezen Anefi, Founder and CEO, DIAMATIX
