Enhance cyber resilience and legal readiness with Acronis Email Archiving for Microsoft 365

Delivers natively integrated Microsoft 365 protection

Centrally manage email archiving and backup, simplifying Microsoft 365 data protection and management.

Deploy effortlessly, in seconds

Provide your Microsoft 365 data with a SaaS, cloud-hosted, fully maintained email archiving solution, eliminating the need for hardware and enabling data sovereignty, supported by a global network of data centers.

Minimize cost

Enhance regulatory compliance with Acronis Email Archiving for Microsoft 365, with zero upfront investment, minimal training and low management overhead. Easily migrate from an existing archiving solution with zero cost.

SIMPLIFY REGULATORY COMPLIANCE

Equip your business with Acronis Email Archiving, aiding compliance with GDPR, HIPAA, NIS 2 and more, featuring powerful compliance capability, robust encryption and adaptable retention policies tailored to suit various industries.

ENHANCE LEGAL READINESS

Benefit from rapid e-discovery, legal hold, audit capability and swift data retrieval to confidently face legal challenges and preserve critical information.

IMPROVE ROI AND MANAGEMENT

Consolidate Microsoft 365 backup and archiving within one unified solution, significantly reducing IT costs and simplifying management.

Effective e-discovery and regulatory compliance

Continuously archive by policy. Protect all mailboxes under the tenant automatically, ensuring new mailboxes are protected as soon as they are created. Mailboxes are archived in real time via API to Acronis servers, providing individual archives for each organization. Emails are kept indefinitely unless specific retention rules are set to erase them from the archive.

Deploy granular mailbox control. Customize retention policies, enabling you to retain and delete emails based on specific time periods and parameters. Legal hold features enable you to overwrite retention rules for audit or legal purposes. Additionally, you can create targeted search queries to display email data based on set parameters for easy retrieval.

Highly secure. Ensure the security of email data thanks to AES-256 encryption with a password specified during setup. Items can only be deleted via retention policy. The solution supports immutable storage, providing robust protection and control over archived emails.

Auditable for compliance. Exportable audit logs provide full visibility into user actions, supporting compliance and forensic investigations.

Simplifying e-discovery. Simplify e-discovery, utilizing rapid and intuitive search, enabling users to access archived email data immediately, facilitating efficient legal and audit processes.

Browse mailbox archives. Browse all users' mailbox archives. Emails are categorized by Inbox / Sent and sorted by received date in descending order, ensuring easy access and organization.

Preview emails. Preview email content after performing metadata searches across all mailbox archives. This feature enables users to view the entire email, including attachments and date stamps, directly from the archive, without downloading or restoring.

Restore emails. Recover emails to the original mailbox or another mailbox within the same or different organization. This functionality supports the simultaneous recovery of one or more emails, enhancing data restoration efficiency.

Sending emails from the archive. Admins can send individual emails, including attachments, directly from the archive to one or more recipients. Accompanying messages can be sent with the original email, facilitating seamless communication and data sharing from the archive.

The Acronis platform advantage

In addition to delivering complete Microsoft 365 protection, Acronis' platform delivers superior protection and user experience across all workloads, thanks to the following natively integrated services:

- Backup for 30+ platforms
- Remote Monitoring and Management (RMM)
- Cybersecurity
