

Acronis

Acronis Cyber Protect Cloud Essentials Edition

Protect more workloads and generate more revenue

To address today's various challenges like attacks, malware, configuration management, and remote management, businesses have adopted a patchwork system of protection tools. However, this Frankenstein approach to assembling security defenses leaves gaps in the system.

To help service providers strengthen their clients' defenses, Acronis introduced Acronis Cyber Protect Cloud. This is the first integrated solution that combines data protection with next generation, AI-based malware and endpoint protection management services into a single pane of glass. This comprehensive suite of services helps you expand your offering and defend your clients' diverse workloads.

Every workload is different, but every workload needs cyber protection whether it stores business-critical data or nothing at all. With Acronis Cyber Protect Cloud Essentials Edition, you can finally protect more workloads with bullet-proof cyber protection capabilities — antivirus and antimalware, URL filtering, vulnerability assessment, patch management, and remote desktop. This enables service providers to deliver cyber protection for more workloads – like thin-clients, servers, and more – in an easy, efficient, and secure way.

Upgrade clients' security

Offer the protection your clients need such as antivirus and antimalware protection, patch management, vulnerability assessments and more

Experience immediate savings

Protect more workloads and decrease costs by consolidating vendors and switching to a solution that fits clients' needs

Generate new revenue

Protect more workloads and clients with an integrated solution that helps you deliver cyber protection in an easy, efficient, and secure way

KEY PROTECTION CAPABILITIES

Vulnerability assessments:

Keep your clients safer by identifying and remediating vulnerabilities in their system. With vulnerability assessments, you can scan clients' machines for vulnerabilities to ensure that all applications and operating systems are up-to-date and working properly.

Patch Management:

Software patches and updates are essential to securing a business environment and can fix known vulnerabilities before they become issues. With patch management support for Microsoft and third-party software on Windows, you can easily schedule or manually deploy patches to keep clients safe.

Antimalware and antivirus protection:

Actively protect your clients from today's advanced attacks. With Acronis Cyber Protect Cloud, you gain extended functionalities of Acronis Active Protection to protect your clients in real-time with AI-based

static and behavioral heuristic antivirus, antimalware, antransomware, and anticryptojacking detection.

Remote desktop:

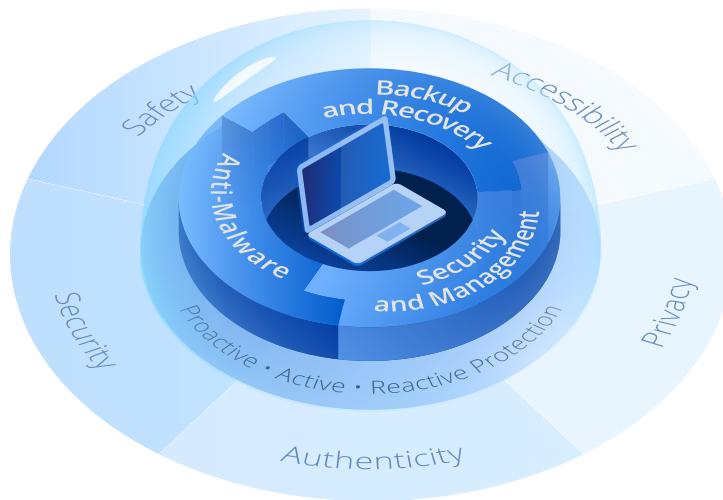

Easily resolve issues on your clients' machines with the remote access capability. With the remote desktop capability, you can remotely connect and manage your end user machines right from the management console.

URL filtering:

Protect clients' machines from drive-by-downloads and advanced threats by blocking access to malicious URLs. Further, with advanced categorization by website type, you can choose which categories users have access to when browsing the web, ensuring they are more focused.

Cloud file-based backups:

Perform basic cloud file-based backups to back up important information. With Acronis Cyber Protect Essentials Edition, each workload receives 5 GB of free Acronis Hosted Cloud Storage.

UPGRADE CLIENTS' SECURITY • EXPERIENCE IMMEDIATE SAVINGS • GENERATE NEW REVENUE
