Acronis Cyber Protect Home & Business

The #1 personal cyber protection solution

Preparedness for the unexpected is essential. Accidents or cyberthreats can compromise photos, videos, important files and even your entire machine. Acronis Cyber Protect Home & Business delivers comprehensive protection and robust security, safeguarding valuable information and ensuring reliability in critical moments.

Traditional security tools are not enough to address today's advanced cyberthreats. The classical approach of employing a combination of standalone protection tools for backup, anti-malware, patch management, configuration management and others is both complex and inefficient — not to mention expensive. Acronis Cyber Protect Home & Business revolutionizes cyber protection by integrating secure backup with comprehensive data protection and cybersecurity, leaving no gaps in the safeguarding of users' data and devices.

This integrated method eliminates complexity challenges and delivers better protection against today's threats, ensuring your peace of mind.

Easy-to-use backup and antivirus

Protects everything — photos, files, applications, systems and the devices they're on — through an intuitive interface that's accessible from anywhere.

Efficient, all-in-one protection

The only personal solution that integrates cybersecurity and secure data backup, eliminating the cost and complexity of managing multiple tools.

Secure from all cyberthreats

Stops any threat from disrupting users' digital life, from disk failure and lost or stolen devices to the latest cyberattacks — including zero-day threats never seen before.

One solution for all your cyber protection needs

Full-image backups

Protects everything to recover anything. A mirror image of the entire system enables easy recovery of what is needed — from the entire system to an individual file.

Real-time protection

Keeps the device and backup files safe from malicious activities with an AI-powered anti-malware engine. It even blocks never-seen-before threats by checking every file interaction in real time.

Anti-ransomware and cryptojacking protection

Safeguards files, apps and systems by detecting and stopping ransomware and cryptojacking attacks. Automatically restores any affected files.

Videoconference protection

Protects data and privacy from hacker attacks when videoconferencing via Zoom, Cisco Webex or Microsoft Teams.

On-demand antivirus scan

Ensures no threats are lurking around on the computer by performing on-demand or scheduled malware scans. Offers the option to perform either a quick file scan or a full system scan to optimize performance.

Web filtering and vulnerability assessment

Blocks access to malicious websites known for distributing malware, phishing attacks, etc. Prevents malware from exploiting vulnerabilities in installed applications by detecting them in advance.

User-friendly cyber protection dashboard

Provides an intuitive dashboard for comprehensive monitoring of backup activity and cybersecurity metrics.

Mobile backup

Supports backup of up to 20 smartphones and tablets under a single account, protecting contacts, photos, videos, messages and calendars.
