

Acronis Technology Ecosystem

Integration with RMM, PSA and RPA

Standardization of services, integration of tools and automation of processes are critical to scale your MSP operation, meet customer expectations and turn a healthy profit. However, this is also difficult to achieve, requiring upfront investments, if you need to do these tasks yourself.

However, it is now easy for your MSP to integrate with the RMM, PSA and RPA (a.k.a. workflow) tools you already use. Built and supported by Acronis or its technology partners, available out of the box and free of charge, Acronis integrations cover all critical scenarios.

Automate everything with Acronis

Provision tenants

Effortlessly create customer accounts for any or all your clients in Acronis, imported from your existing tool stack.

Deploy agents

Mass-install the single Acronis agent across all client devices to enable Acronis RMM, AV, EDR and / or backup, and recovery services.

Automate tasks

Execute Acronis tasks, such as running or resuming a backup or scan, without the need to switch to the Acronis console.

Monitor protection

Keep track of last and next, successful and unsuccessful jobs in your preferred monitoring dashboard.

Sync tickets

Automatically propagate Acronis alerts to create new, update existing or clear expired tickets and alerts in service desk or dashboard.

Map products

Add Acronis offering items to your service catalogue to enable accurate management, quoting and service contracts with ease.

Manage quotas

Bi-directionally synchronize contracted unit quantities with product quotas to ensure subscription billing is correct as agreed.

Automate billing

Report Acronis usages to your billing system, to charge pay per use — fast and reliable — without manual breakdowns.
