Acronis SCS

Snap Deploy

ALL-IN-ONE DEPLOYMENT SOLUTION, ENABLING YOU TO PROVISION HUNDREDS OF SYSTEMS AS FAST AS YOU CAN PROVISION ONE

Gain the Acronis SCS Snap Deploy Advantage

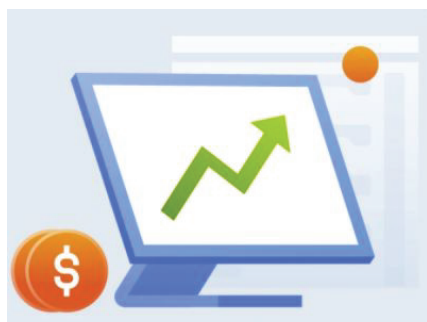

Deploying new software and configurations can be tedious, time-consuming, and complex. Not with Acronis SCS Snap Deploy. Whether you support a large government agency, small municipality, or an educational institution, our user-friendly and award-winning disk-imaging solution helps you simultaneously image multiple devices and systems in one pass.

With flexible per-machine or per-deployment licensing options that fit your organization's needs, configuring new employee workstations or setting up devices for a new training or class just got a whole lot easier. No more manual deployments to individual systems and devices. Just one easy-to-use imaging solution to help your organization get to work faster.

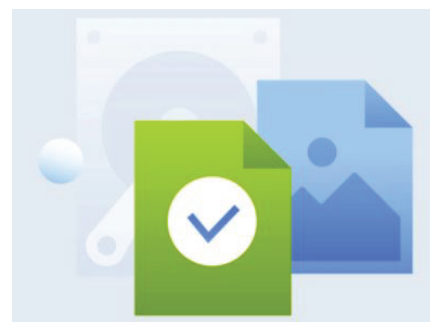

Increase Operational Efficiency

Save time and effort with automated provisioning of new operating systems and software to thousands of systems simultaneously – quickly and reliably.

Provide Complete and Consistent Environments

Reduce configuration errors and ensure your environments are safe, malware-free, and up-to-date.

Manage Deployments with Ease

Acronis SCS Snap Deploy is ideal for rapid bare-metal initial deployment, as well as effortless on-going redeployment to existing live machines.

Acronis SCS Snap Deploy Insights

Flexible Deployment Options

Choose between manual, automatic, user-initiated, standalone, and scheduled deployment to machines and servers running either Linux or Windows – with an option to insert a Windows license key in the machine settings.

High-Speed Dispatch

Rapidly deploy a single image to multiple machines via unicast or multicast from a centralized management console. The machines can be connected either to LAN or WiFi networks.

Machine-Specific Configurations

Customize configurations and assign settings to individual machines that allow you to monitor the status and preconfigure new devices identified by their MAC address and sort the machines quickly and easily by their name, IP address, MAC address, or last deployment finish time.

Dissimilar Hardware Support

Stop configuring a new master system for each make of hardware, with our universal deploy technology you can provision the same image to dissimilar hardware, even simultaneously.

Deployment to Live Machines

Start deployment to individual live Windows machines without manually booting individual machines from the network or CD/DVD, with a one-click option to preserve the original machine name after deployment even when deploying multiple different machines from the same master image.

Flexible Boot Options

Boot bare-metal machines from customizable media using a CD, DVD, flash drive, or from a self-configurable Acronis SCS PXE Server with network boot.

The Top 5 Benefits of Using Acronis SCS Snap Deploy

1. Improve IT productivity by provisioning thousands of machines with the speed and ease of one
2. Save time by eliminating the need to manually configure machines with each deployment
3. Rapidly redeploy machines to refresh or change configurations
4. Reduce IT efforts by deploying to live machines without the need to manually boot them into the deployment environment
5. Automate the process with scheduled deployments and built-in PXE serve and Wake-On-Lan functionality

Acronis SCS Snap Deploy Licensing

Per-deployment	Enables a single successful deployment to a machine
Per-machine	Enables unlimited number of deployments to a particular machine
Per-site	Unlimited deployment of any number of workstations or servers
