

# Acronis Cyber Protect

# One platform. Complete cyber protection.

Acronis

For multisite enterprises, specialized computing and small businesses that struggle with downtime, fragmented tools and rising cyberthreats, Acronis Cyber Protect delivers integrated, AI-driven cyber resilience by combining backup and recovery with advanced security features. It is designed to protect diverse IT environments, from sovereign private clouds and air-gapped OT infrastructure to secure workspaces and multigenerational IT estates.

## Segments

**Enterprise:** Multisite cyber resilience and recovery

**OT:** Industrial computing resilience and recovery

**Small and medium businesses:** Secure backup and ransomware defense

## The challenge

Managing fragmented IT estates across numerous locations, facing complex cyberthreats (ransomware, malware, phishing), ensuring compliance with data sovereignty laws and minimizing downtime, all while grappling with high TCO and management complexity.

OT environments, often air gapped or with legacy systems, require extremely fast recovery without direct IT intervention to minimize costly downtime. Traditional backup solutions are slow, error prone, lack support for very old systems and are too complex for non-IT users.

Small and medium businesses can't afford data loss or downtime. They struggle with the cost, complexity and management burden of multiple disparate solutions for backup, security and endpoint management, leaving them vulnerable to ransomware and other cyberthreats.

## The solution

---

Acronis Cyber Protect ensures business continuity, streamlines management and compliance and reduces total cost of ownership by providing unparalleled protection against evolving cyberthreats, including ransomware and zero-day attacks.

---

## Key benefits

- ✓ Cyber resilience**  
Provides backup, secure recovery from clean archives and fast one-click recovery, facilitating compliance with data sovereignty laws across global data centers or on-premises via Acronis Cyber Protect Local.
- ✓ Rapid restoration**  
Quickly restores any computer from a clean, scanned archive, regardless of age or function, minimizing costly downtime from potential outages, including ransomware attacks, particularly critical for OT in air-gapped manufacturing sites.
- ✓ Secure backup with rapid recovery**  
Integrated anti-ransomware technologies eliminate gaps in defense, providing the most secure backup and reliable recovery from clean, scanned archives with immutable storage options.
- ✓ Reduced TCO**  
Broad, multigenerational OS support enables vendor consolidation while ensuring comprehensive protection, reducing tooling and operational footprints.
- ✓ Push-button simplicity**  
Enables non-IT users to initiate recovery operations without direct IT intervention, crucial for OT, ICS and scientific testing equipment, especially with Acronis Cyber Protect Local's on-premises focus.
- ✓ Comprehensive security capabilities**  
Streamlined and prioritized endpoint detection and response (EDR) and URL filtering ensure peace of mind and avoid costly downtime with natively integrated endpoint security.
- ✓ Simplified management**  
Centralized management with local autonomy and seamless integration with existing third-party tools offers a unified view of backup and recovery operations, deployable locally for enhanced control.
- ✓ Proven compatibility**  
Offers proven compatibility with every major OT and ICS vendor, ensuring local recovery of computers controlling specialized industrial equipment, even where connectivity is prohibitive.
- ✓ Remote endpoint monitoring and management**  
Includes vulnerability assessments, patch management and automated device discovery, simplifying IT management for busy teams without dedicated IT departments.
- ✓ Proactive threat protection**  
Utilizes AI and ML to protect data, applications, systems and backups from advanced cyberattacks, including ransomware, regardless of deployment model.
- ✓ Secure air-gapped IT**  
Designed for environments that need to operate independently from global cloud providers, securing mission-critical supply chains.
- ✓ Cost effective and efficient**  
A unique integration of backup, DR, anti-malware and remote endpoint monitoring and management into a single, cost-effective solution, reducing the need for multiple disparate tools.

Trusted by organizations of every size — from SMBs to Global 2000 enterprises
