

Why Acronis SCS?

Certified cyber protection for the US federal government.

Acronis SCS

Independent & US-based

While our products may look similar to our parent company Acronis, Acronis Sensitive Customer Solutions, also known as Acronis SCS, is an independently operated, US-based organization with 100% US citizens and support. Here at Acronis SCS, the US federal government is our #1 priority; it is our only priority.

While our parent company supplies the global commercial market, Acronis SCS only sells to the US federal government, allowing us to narrow our focus on the specific and unique needs of federal, state, and local governments and education, healthcare, and nonprofit entities.

Certification, Compliance, & 100% US-based support & Data centers

Federal government environments are tightly regulated and must meet stringent operating, encryptions, and storage standards to comply with various regulatory bodies.

At Acronis SCS, we develop and certify our products to the highest levels of security possible to ensure data security across all US federal government computing environments. With numerous certifications — including FIPS 140-2, DoDIN APL coupled with 100% US-based support Acronis SCS provides tested and trusted solutions to US federal government entities. These solutions enable agencies to maintain operational assurance and timely decision-making in the environments where it matters most.

At Acronis SCS, we strive to be thought leaders in the US federal government space and use our knowledge to build solutions specifically for these agencies. We are not your run-of-the-mill software company; we have teams focusing on legislation, policy, and regulating bodies.

Our customer support promise

We pride ourselves on providing industry-leading, fast, and reliable support you can trust. All members of our support team are US citizens. Their training enables them to handle all types of public sector entities, including highly classified environments.

Our certified solution

Acronis SCS Cyber Backup 12.5 Hardened Edition

Our DoDIN APL, Common Criteria certified, and FIPS 140-2 validated full disk image backup and disaster recovery point solution is specifically designed to keep sensitive systems up and running no matter what. With zero integration or outbound connections to online services, certified high-grade encryption and hardware-based random number generation for maximum entropy, and built-in anti-ransomware protection, this game-changing solution radically reduces your network's attack surface.
