Acronis Cyber Protect Cloud Integration with Matrix42

Streamline your service provider business by keeping your entire IT environment interconnected and secure

What's the importance?

With cyberattacks growing in sophistication, speed, and intensity, service providers must realize that it's not a matter of if an attack will compromise their clients' systems, but when. Unfortunately, managing different software, and constantly switching between multiple management tools can lead to missed alerts or unperformed critical updates – putting clients at risk of permanent data loss.

The integration of Acronis with Matrix42 — a leading provider of Digital Workspace Management — allows you to ensure client data is always protected, while alerting you to issues through the same interface you use to manage your other service offerings.

Gain the advantage

The integration with Matrix42 enables remote mass-deployment of Acronis Cyber Protect Cloud — our single-agent solution for cybersecurity, data protection, and endpoint protection management — on as many workloads as needed with minimal efforts. Additionally, you can efficiently manage, configure, and monitor cyber protection plans and statuses through a single interface.

About Acronis Cyber Protect Cloud

The only single-agent solution that natively integrates cybersecurity, data protection, and management to protect endpoints, systems, and data.

The world's best backup and recovery

Full-image and file-level backup and recovery on more than 20 workload types – with nearzero RPOs and RTOs

Enhanced with essential cyber protection at no additional cost

An advanced behavioral detection engine that's powered by machine intelligence stops malware, ransomware, and zero-day attacks on client endpoints and systems

With protection management built for service providers

Enable thorough post-incident investigations and proper remediation, while keeping costs down, by collecting digital evidence and storing it in a secure central repository.

Acronis Cyber Protect Cloud integration with Matrix42 use cases

Keep your clients' workloads operational around the clock, while spending less time on administrative tasks and more on growing your businesses.

Simplified onboarding

Quickly install the integration to selected instances via the Matrix42 Marketplace. You can then enable and configure the extension within the Matrix42 interface by linking Acronis customer tenants to the respective Matrix42 instances, establishing alert mapping settings, and mapping the unmapped cyber protection agents to Matrix42 workloads.

Remotely install, update, or uninstall the protection agent

Service providers can deploy the cyber protection agent remotely to as many workloads as needed via the Matrix42 Unified Endpoint Management platform. The integration supports Windows, Linux and macOS deployments.

Apply and revoke cyber protection plans on a client level

Ensure better protection with less effort by automatically applying and managing cyber protection plans to remote endpoints. Unleash the power of <u>Acronis Cyber</u> <u>Protect Cloud</u> to strengthen the cyber resilience of you and your clients.

Monitor protection statuses for errors and warnings

Monitor the status of the applied protection plans to ensure that antivirus and anti-malware scans run on time, backups are set on schedule, and vulnerability assessments are conducted according to the plan.

Leverage the native Matrix42 ticketing, and alerting functionality for handling protection events

The integration synchronizes Acronis alerts to the alerts in Matrix42 allowing you to process them within your existing rules setup.
