Acronis Security Posture Management for Microsoft 365

Enable efficient and best-practice delivery of Microsoft 365 security posture management services to your clients

Acronis Security Posture Management for Microsoft 365 (part of Acronis RMM) empowers MSPs of any cybersecurity expertise level to provide robust protection to multiple clients at the Microsoft 365 tenant level from a single console. It reduces human labor costs by making complex security and user management tasks manageable for nonsenior technicians and identifies more security risks compared to traditional audit methods.

ENABLE MULTITENANT SECURITY POSTURE AND USER MANAGEMENT

ENHANCE RISK DETECTION, REVEALING 8–9 NEW VULNERABILITIES PER TENANT

DEFINE AND ADD MICROSOFT 365 MANAGEMENT SERVICES TO MASTER SERVICE AGREEMENTS

ENSURE MONITORING OF BASELINE DEVIATIONS WITH AUTO-REMEDIATION

SIMPLIFY COMPLEX TASKS AND MAKE THEM MANAGEABLE FOR NON-SENIOR TECHNICIANS

SHOWCASE SERVICE PROOF AND ENHANCE CLIENT TRUST WITH "GREEN" SECURITY REPORTS

Why MSPs need a specialized solution for delivering Microsoft 365 security posture management

Delivering Microsoft 365 management services without specialized solutions is nearly impossible for MSPs. Microsoft's functionalities are not designed with MSPs in mind and lack critical features such as multitenancy, making management of multiple clients a significant operational challenge.

Why end clients need a third-party tool for Microsoft 365 security posture management

Microsoft 365's shared responsibility model leaves clients accountable for their own security configurations, often creating gaps. Building an internal team and managing these settings manually is costly, error prone and time intensive, increasing vulnerability to cyberthreats.

Available as part of the Acronis Cyber Protect Cloud standard product

(Free features)

Multitenant Microsoft 365 management

Manage all Microsoft 365 tenants for all clients efficiently from a single web console.

Security posture best practice baselines

Access a set of baselines, ready out of the box, that can be applied to one or several client tenants.

On-demand security posture audits

Instantly scan onboarded tenants against best practice baselines and perform security gap analysis whenever needed.

Microsoft 365 user onboarding

Quickly set up new users with the required Microsoft licenses, admin roles, group memberships, mailbox settings and more.

Integration with Acronis and third-party PSAs

Natively integrates with Acronis PSA as well as third-party PSAs. Visit the full list of PSA integrations in our application catalogue.

Requires Acronis RMM and related SKUs to be activated

(Paid features)

Continuous monitoring of security posture vs. baselines

Eliminate repetitive audits and ensure peace of mind with 24/7 automatic detection of new risks.

### Automatic and manual remediation of security risks

Quickly address risks with both manual (directly from the Acronis console) and automatic remediations upon detection.

Microsoft 365 user offboarding

Simplify the complex offboarding process, which should include revoking sign-in sessions, resetting passwords, removing licenses, converting to shared mailboxes and ensuring legal compliance with litigation holds.
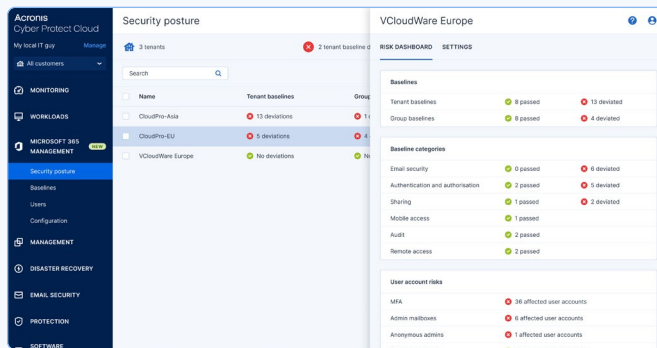

Per-tenant security posture dashboards
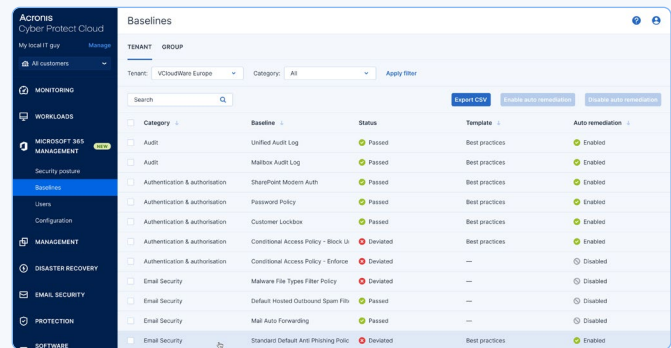

Baseline management on a client level

Part of Acronis Ultimate 365

Designed for MSPs, Acronis Ultimate 365 delivers the most complete, multitenant and natively integrated 7-in-1 threat protection for Microsoft 365. It combines leading backup, email security, collaboration app security, email archiving, security posture management, security awareness training and endpoint security into a single console.
