

# Acronis Management

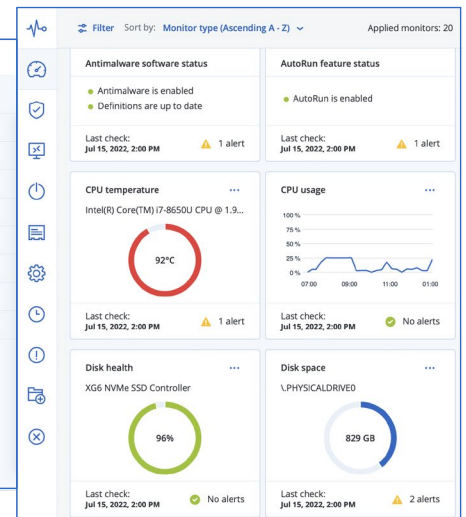

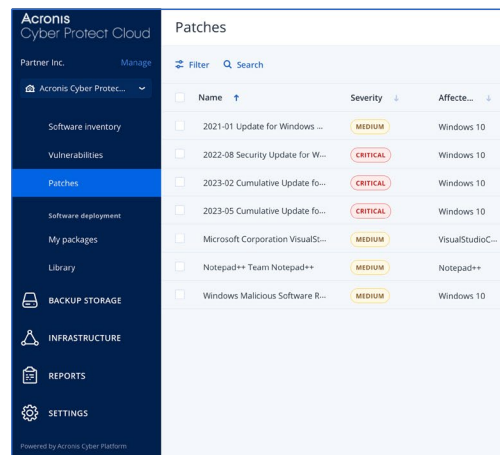

Achieve peak MSP performance with a natively integrated, secure, AI-powered RMM

Part of **Acronis** Cyber Protect Cloud

# Acronis

Acronis Management is a natively integrated, secure, AI-powered RMM that enables your MSP to deliver superior IT administration and monitoring services, improve security posture for both endpoints and Microsoft 365 and boost technician performance through automation.

## Natively integrated with cybersecurity and data protection

Part of Acronis Cyber Protect Cloud, Acronis Management shares the same console and agent, unifying endpoint and Microsoft 365 management, remote desktop, backup, DR, XDR and PSA. This native integration brings unique features like fail-safe patching and AI-assisted scripting for cyberattack remediation that enhance protection, reliability and efficiency.

## Security-first approach and extensive security features

Acronis addresses cyberthreats with full-cycle security aligned with major compliance standards like NIST and secure code development. Acronis Management strengthens these measures with vulnerability assessments, patch management, scripting with self-defense, digital signature checks and anti-malware scans for software deployment, secure remote access and native integration with Acronis XDR.

## Automate everything — powered by AI and ML

Boost efficiency with features like anomaly-based monitoring of systems and hardware performance to reduce the number of alerts; AI-based scripting to automate repetitive tasks and remediate cyberattacks faster; and ML-based hard drive health monitoring to proactively detect early signs of failure.

## ASSET MANAGEMENT

### Device Sense™ **Free**

Discover, identify and protect all devices within a client's network in an automated and nondisruptive way.

### Hardware inventory **Free**

Maintain up-to-date information on hardware assets to effectively plan replacements.

### Software inventory

Perform automatic and on-demand scans and access reports on installed software.

## SECURITY AND COMPLIANCE

### Vulnerability assessments **Free**\*

Enable automatic scheduled vulnerability scanning for all major OSs: Windows, macOS and Linux.

### Automated patch management with fail-safe patching **Unique**

Put patch management on cruise control. Ensure patches and updates for Microsoft and 300+ third-party applications are applied automatically, with easy rollback if issues arise.

### Integration with Acronis EDR and XDR **Unique**

Patch affected machines to prevent future attacks, remediate attacks using AI-assisted scripting and remotely access affected machines.

## MONITORING AND RESPONSE

### System and hardware monitoring

Monitor 24 system and hardware performance metrics for Windows and macOS, including anti-malware status and firewall monitoring, as well as custom metrics.

### ML-based anomaly detection

Enable anomaly-based system and hardware monitoring that predicts issues before they occur and cause damage.

### Auto-response actions

Accelerate problem resolution with automatic responses upon alerts: run scripts, restart services and execute actions.

## SYSTEM ADMINISTRATION TASK AUTOMATION

### AI-assisted scripting

Automate IT tasks across Windows and macOS with prebuilt scripts, AI-powered script generation and scalable script execution plans.

### Scalable script management

Create and apply scripting plans at scale across a fleet of client machines, scheduling script runs based on conditions such as machine activation or user inactivity.

### DeployPilot™ **Unique**

Centralize and automate software deployment across all client environments. Address security risks with automatic anti-malware scans and digital signature checks of packages.

## REMOTE SUPPORT

### Built-in, top-tier remote desktop

Deliver fast and secure remote assistance with a built-in remote desktop solution, available from the same console.

### Quick Assist

Provide instant support and remote connections, even for unmanaged endpoints without an agent installed.

### Quick remote actions

Perform remote actions such as restarting the system, putting the device to sleep and emptying the recycle bin.

## MICROSOFT 365 MANAGEMENT **New**

### Security posture management

Offer robust security posture management services to multiple clients efficiently, from a single console. Uncover more security risks and make complex tasks manageable even for nonsenior technicians.

### Free Microsoft 365 management features available **Free**

Get powerful features at no cost, including multitenant Microsoft 365 management, security baselines, baseline deviation alerts, on-demand security audits and Microsoft 365 user onboarding.

### Advanced Microsoft 365 protection

Enable continuous monitoring of security posture, automatic risk remediation and compliant user offboarding.

\* Vulnerability assessments for third-party Windows applications are available as part of Acronis Management, while assessments for Microsoft products, Apple and third-party applications and Linux are included in the Acronis Cyber Protect Cloud standard product for free.
